## Dimming characteristics

Dimming function		Min	Typ.	Max	Instructions
1-10V Dimming ( Optional )	Safe operation voltage range	0V	-	12V	Beyond the range maybe lead to a failure of the driver.
	Rated operation voltage range	1V	-	10V	Negative logic dimming mode is also available by program
	Dimming output range	10%	-	100%	0% is only for positive logic dimming by program.
PWM Dimming ( Optional )	PWM high level	9.5V	-	10.5V	-
	PWM low level	0V	-	0.5V	-
	Rated dimming frequency	300Hz	-	2000Hz	-
	PWM duty cycle	10%	-	99%	Output full power at 99% duty cycle
Resistor Dimming ( Optional )	Rated external resistance value	10KΩ	-	100KΩ	Bigger resistor won't increase the output.
	Dimming output range	10%	-	100%	Negative logic dimming mode is also available by program
Multiple time-controlled dimming (Optional)	MCU control		set dimming function Segment by segment through program		three operation modes for selection.
	Timer control		The default is six segments, Can be customized. 24H a cycle.		With extra timer controller outside.

**Note:**

1. Output current of dimming port: 100uA (typical value);
2. The maximum operation voltage for the dimming port is 12V. Wrong voltage beyond the range or a reverse connection may lead to a critical failure of the driver.
3. When over-temperature protection happens, the threshold of output power(or output current) for dim-off and turn-on will keep the same as that in normal condition. Since the output power has been decreased to a half of normal condition, the dimming signal from the port need to be doubled to meet the same threshold as a result. Only for P version.
4. Dim -off function is available only for positive logic dimming mode of P version. Please consult the technician for details if you have other requirements.
5. All these drivers will not work in the no-load mode.

**Protection**

Protection	description
under-voltage protection	When the input voltage is less than 165+/-15Vac, the output power decreases.
Output over-voltage protection	hiccup mode, and recovers automatically when the fault condition is removed.
Output short circuit protection	Hiccup mode, and recovery automatically when the fault condition is removed.
Over temperature protection	when the temperature of the case is greater than 95+/-5°C, the output power decreases to a half.
Output over-power protection	The maximum output power is limited to about 1.1 time of the rating automatically. Only for P version

**Note:**

1. Unless otherwise specified, all parameters should be measured at the condition of 230Vac (50Hz) input ,with rated load ,and ambient temperature of 25°C;
