Dimming characteristics

Dimming function		Min	Typ.	Max	Instructions
0-10V Dimming (Optional)	Safe operation voltage range	0V	-	12V	Beyond the range maybe lead to a failure of the driver.
	Dimming output range	0%	-	100%	-
	Rated operation voltage range	0V	-	10V	Negative logic dimming mode is also available by program
PWM Dimming (Optional)	PWM high level	9.5V	-	10.5V	-
	PWM low level	0V	-	0.5V	-
	Rated dimming frequency	300Hz	-	2000Hz	-
	PWM duty cycle	0%	-	99%	Negative logic dimming mode is also available by program
Resistor Dimming (Optional)	Rated external resistance value	0KΩ	-	100KΩ	Bigger resistor won't increase the output.
	Dimming output range	0%	-	100%	Negative logic dimming mode is also available by program
Multiple time-controlled dimming (Optional)	MCU controlling		Segmented dimming function		operating mode
	Timer control		The default is six segments, Can be customized		24H to achieve a cycle

Note:

1. Output current of dimming port: 100uA (typical value);

2. The maximum operation voltage for the dimming port is 12V. Wrong voltage beyond the range or a reverse connection may lead to a critical failure of the driver.
3. When over-temperature protection happens, the threshold of output power(or output current) for dim-off and turn-on will keep the same as that in normal condition. Since the output power has been decreased to a half of normal condition, the dimming signal from the port need to be doubled to meet the same threshold as a result. Only for P version.
4. Dim -off function is available only for positive logic dimming mode of P version. Please consult the technician for details if you have other requirements.
5. All these drivers will not work in the no-load mode.

Protection

Protection	description
Input under-voltage protection	When the input voltage is less than 240±15Vac, the output power decreases.
